

Lathe Tool Organizer

by ryan.pouin.19

In this intractable I will show you how to make a lathe tool organizer, you will need a sheet of plywood 1/2 inch, pvc 7 inch at 45 degree angles, and scrap wood depending on the number of things you need to organize.

https://youtu.be/1LTrp_ITlz8

Step 1:

Cut PVC pipe to the desired length i cut 7 inch pieces, then sand the ends if needed. I cut them at a 45 degree angle.

Step 2:

Screw them down or glue them down to some plywood 1/2 inch, I would suggest screws 1/2 inch.

Step 3:

I used a drill press to make holes in everything before i started attaching things.

Step 4:

You can take any type of scrap wood to use to hold the tools. i just drilled holes through some wood and organized it to fit.

Looks great! Love the use of PVC pipe :)
